JAMYANG PONSAR

Valley Stream, NY | (516) 754-5745 | jamyangponsar@gmail.com | linkedin.com/in/jamyangponsar | github.com/JamPonsar

EDUCATION

Bachelor of Science in Computer Science | Stony Brook University | *Graduation: December 2024*

PROFESSIONAL EXPERIENCE

Capgemini | *New York, NY* *Jan 2026 - Present*

Software Engineer - AI Development

- Designed and built production **LLM-powered AI agents** using **Claude (Anthropic API)** and **LangChain**, engineering **multi-agent orchestration systems** with custom prompt templates, system instructions, chain logic, and tool-use patterns to power enterprise internal tooling.
- Specialized in **Anthropic's ecosystem**: leveraged **Claude Code** for AI-assisted development workflows, integrated **MCP servers** for cross-service API connectivity, and applied advanced **prompt engineering** to optimize agent reliability, reasoning quality, and output consistency.
- Architected agentic backend services using **Python** and **FastAPI** – including **RESTful APIs**, SQLite data layers, and JSON Schema validation – enabling scalable, production-ready **AI agent pipelines**.
- Built **React** front-end components interfacing with AI-driven backends; collaborated cross-functionally to ship a business-ready **agentic AI product** using **Claude Code** and **MCP server** integrations.
- Supported **AWS-to-Azure cloud migration** (code, repos, databases); configured **Azure** workspaces; participated in **Agile** sprints including planning, estimation, and code reviews.

Controls NYC | *New York, NY* *June 2024 - August 2024*

BMS Programmer and QA Developer

- Developed BMS software solutions using data retrieval algorithms and virtual machine architectures to enhance alarm monitoring and legacy system compatibility; automated data workflows via **Python** scripting and **Niagara 4 API** integrations.
- Modernized BMS interfaces with reactive **JavaScript** components; led **QA testing**, debugging, and performance optimization for major deployments (Bronx Care Hospital, Goochland County Elementary School); produced technical documentation and client-facing video walkthroughs.

PROJECTS

Bank Customer Churn Analysis *December 2025*

- Conducted end-to-end analysis on a **10,000-record banking dataset** (data cleaning, **EDA**, feature engineering, statistical correlation) and created **15+ visualizations** to uncover churn patterns across demographics and geography.
- Identified key churn drivers – geographic concentration (Germany: 32.4% vs 16% avg), complaint filing (strongest predictor), member inactivity (2.5x risk), age 40+ higher risk – and synthesized findings into **business-actionable retention strategies**.

Dolphin Data Sharing *September 2024 - December 2024*

- Built a **decentralized P2P file-sharing app** with **cryptographic hash-based** uploads/downloads, **MongoDB** metadata storage, HTTP proxy management, and secure login with wallet creation and hashed password authentication.
- Designed a **React + Material UI** interface with account management and dark mode; configured **blockchain tools** (btcd, btcwallet via **Go**) for secure transaction handling and coin mining.

Fake Stack Overflow *March 2024 - May 2024*

- Developed a full-stack Stack Overflow clone – Q&A posting, tag filtering, upvoting, pagination -- using **React, Node.js, Express.js**, and **MongoDB**, with a responsive CSS/JSX front end and dynamic state management.

SKILLS

AI & Agents: Claude API, Claude Code, LangChain, Anthropic Ecosystem, Agentic AI, Multi-Agent Orchestration, MCP Servers, Prompt Engineering, RAG, Gen AI
Languages: Python, JavaScript, TypeScript, SQL, Java, Go, HTML, CSS
Frameworks: FastAPI, React, Node.js, Express.js, Next.js, Material UI
Cloud & DevOps: Azure, AWS, Git/GitHub, CI/CD, Docker, Kubernetes, Agile/Scrum, RESTful API Design, Distributed Systems
Databases: MongoDB, PostgreSQL, MySQL, SQLite, Foundry
Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Jupyter, PySpark, ETL Workflows
