PROFESSIONAL EXPERIENCE

Capgemini | *New York, NY* *Jan 2026 - Present*
Software Engineer

- Developed **LLM agents** for the **self-correcting stage of BNY's agentic rules pipeline** that cluster DMN failure reasons, generate and apply fixes, and regenerate the model; built **chain-of-thought tracing** and a **React** UI that explains each agent step to subject-matter experts.
- Designed a **5-agent Claude pipeline** that turns a plain-English description of a data source into **working SQL**, with confidence scoring that routes uncertain output to **human review**.
- **Led a team of 4** building a **LangChain** agent pipeline that generates custom React front-end pages from a prompt or image; owned the agent logic, **MCP server** integrations, and the **Python/FastAPI** REST layer with JSON Schema validation.
- Supported **AWS-to-Azure** cloud migration (code, repos, databases); configured Azure workspaces.
- Worked in **Agile** sprints using **Jira** boards for sprint planning, and regular code reviews.

Lily & Lilac | *Amityville, NY* *September 2025 - April 2026*
Web Product Developer

- Designed and built the **Shopify storefront** for Lily & Lilac, a new luxury tile brand, owning it **end to end** from **client discovery** and **UI design** through **launch of the live site**.
- Built custom sections and pages directly in the Shopify theme with **Liquid, HTML, CSS and JavaScript**, rebuilding an unfinished, inconsistent site into a **cohesive premium storefront**.
- Turned open-ended requirements into an **approved design** through competitor research, **multiple prototypes** and rounds of **client feedback**, while keeping to a **fixed budget and timeline**.

Controls NYC | *New York, NY* *June 2024 - August 2024*
BMS Programmer and QA Developer

- Developed BMS software solutions using data retrieval algorithms and virtual machine architectures to enhance alarm monitoring and legacy system compatibility; automated data workflows via **Python** scripting and **Niagara 4 API** integrations.
- Modernized BMS interfaces with reactive **JavaScript** components; led **QA testing**, debugging, and performance optimization for major deployments (Bronx Care Hospital, Goochland County Elementary School); produced technical documentation and client-facing video walkthroughs.

PROJECTS

Dolphin Data Sharing *September 2024 - December 2024*

- Built the full **React/Material UI** front end for a team-built decentralized P2P file marketplace, covering file browsing, purchases, wallet balances and account management, in both browser and Electron.
- Implemented **secure account authentication** with **hashed passwords** and wallet creation, and integrated the **btcd/btcwallet** (Go) **mining and balance system** so users could mine blocks, track balances and pay for files.

Bank Customer Churn Analysis *December 2025*

- Analyzed a 10,000-record banking dataset with **SQL (SQLite)** and **Python (Pandas, Seaborn)**, identifying churn drivers such as complaints, inactivity (2.5x risk) and geography (Germany 32.4% vs 16% avg) and turning them into retention recommendations.

EDUCATION

Bachelor of Science in Computer Science | Stony Brook University | *Graduation: December 2024*

SKILLS

AI & Agents: Claude API, Claude Code, LangChain, MCP Servers, Multi-Agent Orchestration, Prompt Engineering, RAG, JSON Schema
Languages: Python, TypeScript, JavaScript, SQL, Go, Java, HTML/CSS
Frameworks: React, Next.js, Node.js, Express.js, FastAPI, Material UI
Cloud & Tools: Azure, AWS, Git/GitHub, Docker, Kubernetes, CI/CD, REST APIs, Distributed Systems, Jira, Agile/Scrum
Data: PostgreSQL, MongoDB, MySQL, SQLite, Foundry, Pandas, NumPy, Matplotlib, Seaborn, Jupyter
